Protect children from online dangers.

Why AOL and MSN parental controls are not effective?

Even though the MSN and AOL offer parental controls but the moment their browser is closed and a new browser is opened, their parental control vanishes. Also they are mainly providing filtering and blocking and do not have monitoring, real-time alert notification, access to insightful reports on ALL activities and many other useful features that OnlineSafetyPAL offers.

www.OnlineSafetyPAL.com

Protect children from online dangers.

The parental controls with MSN and AOL can be bypassed with ease, but because the OnlineSafetyPAL is integrated tightly with the operating system, it's nearly impossible for even the most computer-savvy teenager, to detect or disable it. Because of this OnlineSafetyPAL offers the protection service with the maximum assurance and peace of mind regardless of your connection speed or software.

Unlike parental controls from MSN or AOL, once you turn on OnlineSafetyPAL it cannot be bypassed by simply opening another window. OnlineSafetyPAL monitors and records ALL web traffic coming in and going out of the computer, not just the traffic which flows to/from one particular browser or client.
